

## **2022 Award for Excellence** in environmental, health, safety and security

### **Dover Chemical Corporation** **Dover, Ohio**

Dover Chemical had long employed an industry standard catalyst in its manufacturing process that is highly toxic by dermal and inhalation exposure and is moderately toxic through oral route. The risk had long been deemed acceptable due to the low potential for operator exposure during normal operation. However, during periods of maintenance and shutdown there was a much higher risk of exposure. During a recent Process Hazard Analysis revalidation, management challenged the process development group to find a safer alternative.

*The Ohio Chemistry Technology Council recently announced the recipients of their Annual Awards for Excellence which recognizes Ohio chemical companies who have demonstrated exceptional performance in environmental, health, safety and security over the previous year. Awards were presented to 24 facilities from around Ohio, all of which had significant contributions and achievements in 2021.*
