

2022 Award for Excellence in environmental, health, safety and security

Dupont Inc. **West Alexandria, Ohio**

A team at Dupont's West Alexandria site implemented a new in-line viscometer. The instrument reduces the need to sample a hot polymer product from the reactor. The site experienced a burn injury in 2018 related to hot sampling. By reducing the samples required, the potential for injury is significantly reduced. The instrument also improves product quality and consistency. This shows how improving health and safety performance is compatible with other business objectives and can be incorporated into everyday work processes.

The Ohio Chemistry Technology Council recently announced the recipients of their Annual Awards for Excellence which recognizes Ohio chemical companies who have demonstrated exceptional performance in environmental, health, safety and security over the previous year. Awards were presented to 24 facilities from around Ohio, all of which had significant contributions and achievements in 2021.
