

DuPont Inc. - West Alexandria

DuPont's West Alexandria site continuously looks for opportunities to reduce its environmental footprint. In 2022, a new process was put in place to eliminate the aerosol can hazardous waste stream. Used cans are punctured and residual solvent is collected. The solvent is disposed in an existing waste stream and the cans are then recyclable. This saves money by eliminating a hazardous waste stream. This shows how environmental improvements are compatible with business objectives and can be incorporated into everyday work processes.
