

The Lubrizol Corporation – Painesville, Ohio

The Lubrizol Corporation recognizes how critical it is for people working at their facilities to be provided an environment of safe and secure operations. The age of the Painesville plant and design of their systems results in the need to frequently perform operations and maintenance activities from elevated work surfaces. A comprehensive, multi-year plan was developed to identify, assess, and mitigate fall hazards throughout the site. Over 3 million dollars has been spent on this initiative. In the past two years alone, 20 Capital Projects and over 50 smaller improvements have been executed to reduce risks while working from heights.
