

PPG – Euclid, Ohio

PPG Euclid has a manufacturing workcell that is dedicated to making Zirconium technology products. This area has a dedicated waste stream due to the nature of the products. Most of the products take the same raw materials. Prior to the project implementation rinse water from the work cell was being shipped to a waste disposal company. Recycling this rinse water will save \$26,900 in cost avoidance in hazardous waste disposal and eliminate 34,500 lbs of hazardous waste generation.
